

“A Whole New Twist on Tree Staking”

TWISTER Tie Down™

TWISTER TIE DOWNS™

Twister Tie Downs™ are one of the Arbor Industry's newest and most effective tree staking systems. Twister Tie Downs™ are a screw-like apparatus that the installer twists into the ground using our 28" Metal T-Bar, which is included in every starter kit.

REDUCE WORKER INJURY

No heavy hammers to swing, No knives needed to cut rope or webbing and the elimination of driving rods. Our webbing comes pre-cut and measured with a High Visibility yellow Tensioner.

LESS LIKELY TO DAMAGE UNDERGROUND UTILITIES

The patented designed tip of the Twister Tie Down™ ensures that as the anchor turns in the ground the tip will deflect the anchor to one side of the pipe or cable, thus, less likely to cause damage.

NO ROT U.V. WEBBING

Our webbing is proudly made in the USA 🇺🇸 of multifilament polypropylene that will not rot and is dark-green with U.V. stabilization added.

HIGH VISIBILITY TENSIONER

Our Tensioner is made of high strength 30% Glass filled Nylon, in a highly visible yellow which eliminates the need for flagging the guides.

HIGH DURABILITY ANCHOR

Our anchor is made of 30% Glass filled Polyurethane that is High Impact, and abrasion resistant and is green in color.

NO SPECIAL TOOLS

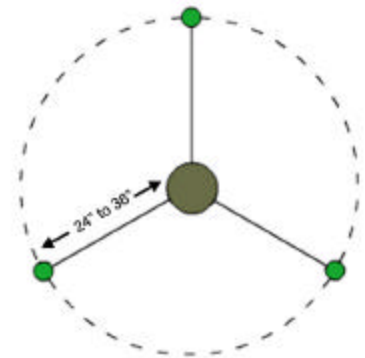

Any 3/8" square shaft with a handle will twist our Tie Down into the ground. We also have available for purchase a standard ready-made handle.

MADE IN THE USA 🇺🇸

ALL components of the Twister Tie Downs™ are manufactured and assembled in the United States of America.

Ensures Straight Growth • Prevents Wind & Storm Damage
Helps Prevents Root Damage

Note: Evenly space TWISTER Tie Downs™ around tree for best results.

Made and Assembled
in the U.S.A.
